crew,

i appreciate all you guys. we have a extremely important job to accomplish.

the past is the past, i'm not going waste on second of my time grinding a rusty old axe.

bobby and kenny began testing different types of radios in january of 2025. robert, kenny and i started figuring out the communications system America will use for continuity of communications in August 2025. robert completed the reverse engineering of the system. kenny participated in feild testing the system. i have taken a back seat for the most part, learning the system as robert figured it out and participating in the structuring of separate company platforms, departments, sub departments, groups, relevance groups, user functions. initially we are starting with chinese tech and server system. the cost of american soft ware and hardware is expensive, the one word i use to describe it is avarice, robert egregious! our intent is to nationalize American communications manufacturing, bring manufacturing home, the American people will own it all, and receive the benefit, in tandem build a American based server network which will provide us with data sovereignty.

begining in september 2025 david, joey, robert, kenny, rockie, and i were working on the master grant proposal. david and joey were using caude AI to go through the data bobby created and compile it in a single proposal, the proposal was up 100 pages. the more data that was fed into claude, the more convoluted the proposal became. there were consistent errors in structure and dollar totals. the document was converted to a specific file format which we were unable to simply go into and make corrections. there was too much information put into one document. the project wasn't going anywhere. i pulled rank and motioned to abandon the direction we were headed and immediately submit the proposal to boyd for comms in december 2025 which was complete in a different format. this created a shit storm, david and joey were bent, people were getting defensive and slandering each other. david and joey asked bobby to dump robert and i. Bobby fired them and i supported it. looking back at the situation there should have been a cool off time period and correct conflict resolution. i take full responsibility.

here we are 6 months later. the master grant proposal was almost completed. i went back through the DEEP program documents on the share drive. i found DEEP was missing UAV, C-UAV, air/subsurface assets. air assets fixed and rotary. personnel. specific gear load outs. there was conflicting vessel counts and specs. the area of operations was not clearly defined in my eyes. i asked bobby for info, we received it. the completed work regarding the DEEP project now needs to be redone. no big deal, just more time.

the training asset has been restructured. robert and i have actual numbers to go off of for facilities and personnel. this is a simple fix on the PP&E sheet.

DEEP is the hot topic. it will take robert and i a few minutes to correct the master grant proposal.

Lisa Torres,
please, i invite you to review the master grant proposal work we have all participated in, i invite everyone on the crew to take a gander.

i have spent the entire weekend hustling to make my rent by monday work is scarce. i have not had the time to go through the DEEP program this weekend. i have most of next week free from work to get caught up, robert and i will make the corrections to the master grant proposal for everyone to review. then submit it to boyd.

i appreciate your assistance,
andy
