This message is from Tony Carrol's Delta Chat

This is a message sweet and short. If you dont know how GFG will work going forward, read this, perhaps Ewa you will be able to understand.

The GFG Digital Treasury App is designed specifically to solve the "idle assets" problem by turning your gold-backed holdings into a functional currency. Because your assets are already in a Prosperity Account, the app will be your primary tool for managing the conversion and spending.
Here is the breakdown of how the conversion and usability will work:

1. The Conversion: AFD → AFD1
The app acts as the automated "bridge." You will not need to use an external website if you are already on the GFG platform.
* One-Time Process: When you log into the app for the first time, you will likely see a prompt to "Upgrade" or "Migrate" your balance.
* Internal Swap: The app will convert your AFD to AFD1 at a 1:1 ratio. This is a permanent move; once you convert to AFD1, you are on the new, compliant ledger.
*s, perhaps Ewa you will be You do not have to convert it again to make it usable. The whole point of AFD1 is that it is the final, spendable version of the currency.

2. How to use AFD1 (The "Spendable" Phase)
Once your balance shows as AFD1 in the app, it is immediately active. You can use it in several ways:
* Peer-to-Peer (P2P) Transfers: You can send AFD1 to any other Prosperity Account holder or GFG App user instantly by scanning their QR code or entering their account handle. This is intended to be the primary way "Sovereign Families" trade with one another.
* Merchant Payments: The app features a "Scan to Pay" function. At participating GFG-affiliated merchants, you simply scan their business QR code, and the AFD1 is deducted from your Prosperity Account to pay for your goods.
* The GFG Debit Card: There have been technical updates regarding a physical or virtual GFG Debit Card that links directly to your AFD1 balance. This would allow you to use your gold-backed funds at any standard point-of-sale terminal that accepts major card networks (though transaction fees would apply).
* Liquidity Outlets: If you need "cash" (like ZAR or USD), the app is expected to have an "Off-Ramp" feature. This allows you to sell your AFD1 back to the Treasury or to a decentralized liquidity pool in exchange for fiat currency, which can then be sent to your traditional bank account.

3. Why the "AFD1" Name Change?
The reason you use it as AFD1 and not just AFD is because the "1" signifies that the token is "Live" and "Verified."
* AFD (Legacy): Was the initial issuance/placeholder.
* AFD1 (Current): Is the active, gold-audited version that complies with 2026 reporting standards (like the GENIUS Act).
Summary of Action
1. Wait for the official app download link inside your GFG dashboard.
2. Login and approve the 1:1 conversion from AFD to AFD1.
3. Spend directly as AFD1 via the app's QR scanner or transfer features.
Monitoring Tip: Keep an eye on your Prosperity Account's "Announcements" tab. The Treasury has indicated that the first wave of AFD1 usability will be for internal transfers between members, with the Merchant Network and Off-

Ramps following shortly after the migration portal is stable.
